Applicant: Julius I. Pershwitz )  
Serial No.: 10/770,463 ) Examiner: R. J. McCarry, Jr.  
Filed: 02/04/2004 ) Art Unit: 3617

AMENDMENT

Commissioner of Patents  
PO Box 1450  
Alexandria, VA 22313-1450

Sir:

In reply to the Office Action dated February 4, 2005, please enter the following amendment.

Remarks

Independent Claim 1 and 21 as presently on file set forth a suspension design for a railway truck wherein a bolster has two ends. Each bolster end is supported on a spring group on a first and a second sideframe. The spring group is said to have a reserve capacity of less than 1.50.

Independent Claim 14 sets forth a method for turning a spring suspension of a railway truck. A bolster is said to be coupled to the sideframes with a suspension system. The suspension system comprises a spring group with a reserve capacity of less than 1.50.

Reserve capacity is defined at page 5, paragraph 15 of the present application and reserve capacity is said to be calculated by taking the spring groups total solid capacity and dividing it by the total loaded weight less the unsprung truck weights, with the difference divided by the number of spring groups. An example is given of a proper calculation.

The examiner has rejected claims 1-21 under 35 USC 102(b) as anticipated by US Patent No. 5,524,551, Hawthorne et al. Hawthorne et al discusses a railway truck having a bolster with two ends each supported on spring groups in openings of two sideframes. But the Examiner then states "The spring anomalies are further comprised of a reserve capacity less than 1.5 as described in column 11 line 59 to column 12 line 4. They are also shown in figure 7".

Applicant's attorney has carefully read Hawthorne et al. The term reserve capacity does not appear in Hawthorne et al. The definition of the term "reserve
